Hi Avi

Please look into the following comments

- Check your calculations for those parts…please refer to the files I have shared with you

🔄 SAFE Conversion Calculations

1. Series A Share Price:
CA$1,200,000 ÷ 100,000 = **CA$10.8**

2. Seed Discount Price:
CA$10.8 × (1 - 0.2) = **CA$8.64**

3. Seed Cap Price:
CA$1,000,000 ÷ 100,000 = **CA$10**

4. Optimal Price (Lower of the two):
MIN(CA$8.64, CA$10) = **CA$8.64**

5. Seed Conversion Shares:
CA$120,000 ÷ CA$8.64 = **13,889 shares**

6. Seed Conversion Value:
13,889 × CA$10.8 = **CA$150,001.35**

MOIC (Multiple on Invested Capital):
Seed Investors: **1.25X** (CA$150,001.35 value / CA$120,000 investment) | Series A Investors: **1.00X**

- Inconsistent…once has the detailed calculations and the other has just the results

MOIC (Multiple on Invested Capital):
Seed Investors: **1.25X** (CA$150,001.35 value / CA$120,000 investment) | Series A Investors: **1.00X**

- Need to change this part and remove some ….existing vs target doesn't make sense

- Share price is not an input …it will be calculated. Please remove.

Series A Safe

Series A Round with SAFE Conversion

Input Parameters

Pre-Money Valuation	Series A Investment	Founder Shares	Share Price
CA$1,200,000	CA$400,000	(Round 0) 100,000 3 founder(s)	CA$10.8 per share

- What do you mean by option pool top up calculations. Option pools are the input assigned by the founders …please clarify

Option Pool Top-up Calculation

Formula: Total Post Shares = (Founders + Seed Investors + Series A Investors) ÷ (1 - Target Option Pool %)

Calculation: (100,000 + 13,889 + 37,037) ÷ (1 - 0.2)

Result: Need to add 26,621 new option shares to reach 20.0% target pool

- New shared options if they are new should be under new column which reflects new shares …if that is the case new share column is missing
