Series A labeled as a Convertible Note or SAFE is a bridge scenario—money comes in now as debt-like, but converts later (typically at Series B priced round). Pre/Post-Money fields still get filled for **planning and projection**, not immediate share issuance. breakingintowallstreet +1

Fields to Fill (Even for Note/SAFE)

All fields are entered upfront to model **expected future dilution** in your cap table UI:

Field	Value Example (CAD)	Explanation for Series A Note/SAFE
Investment Amount	2,000,000	Cash received now as note principal. Tracks round size breakingintowallstreet.
Currency	CAD $	Standard.
Pre-Money Valuation	20,000,000	**Qualified trigger valuation**—the Series A pre-money where conversion *would* happen if priced now. Used for cap calculations coolaygo +1.
Post-Money Valuation	22,000,000	Investment Amount + Pre-Money. Shows *projected* post-money if converted here. UI can auto-fill breakingintowallstreet.

Funding round Series

Instrument type: Convertible Note/Safe

Round size?

Explain for this captable suppose round 0 and founder shares 100000 and than create this round Funding round Series

Instrument type : Convertible Note/Safe round size ? after that Explain captable calculation ?

Round 0: Founders hold 100,000 shares (100% ownership). No dilution yet. Cap table is simple.

Series round with Convertible Note/SAFE adds cash as a liability—no immediate shares issued. Cap table shows "pending conversion."

Round Size Fields to Fill

Even for Note/SAFE, enter these for projections (converts later):

Field	Example (CAD)	Purpose
Investment Amount	5,00,000	Cash received now (principal).
Currency	CAD $	Standard.
Pre-Money Valuation	40,00,000	Valuation cap for conversion math.
Post-Money Valuation	45,00,000	Auto: Pre + Amount. Projected if converted now.

Add these instrument terms:

- Discount: 20%
- Pro-rata: Yes/No

Immediate Cap Table (Post-Round, Pre-Conversion)

Holder	Shares	Ownership	Notes
Founders	1,00,000	100%	Fully diluted pre-SAFE
Note/SAFE	0	0%	$500k liability
Total	1,00,000	100%	No dilution yet

Status: $500k cash in, recorded as pending convertible.

Conversion Trigger (Next Priced Round, e.g. Series A)

Assume Series A: $2M new money, $10M pre-money (excluding SAFE), Series A price = $0.67/share ($10M ÷ 15M shares incl. pool).

SAFE Conversion Calc:

1. Cap price: Cap ÷ pre-SAFE shares = $4M ÷ 100,000 = $40/share.
2. Discount price: Series A price × (1-20%) = $0.67 × 80% = $0.536/share.
3. Use lower: $0.536/share.
4. SAFE shares: $500k ÷ $0.536 = 933,000 shares (preferred Series A class).

Post-Conversion Cap Table

Holder	Shares	Ownership
Founders	1,00,000	6.9%
SAFE Investor	9,33,000	64.4%
Series A	30,00,000	20.7%
Option Pool	15,00,000	10.3%
Total	1,46,33,000	100%

Key: SAFE dilutes founders heavily due to low cap. Pre-money excludes SAFE shares; they convert "as-if" at trigger. Always model full next round for accurate projection

suppose create Rouund 0
and Next round series A and Convertible Note round size ?

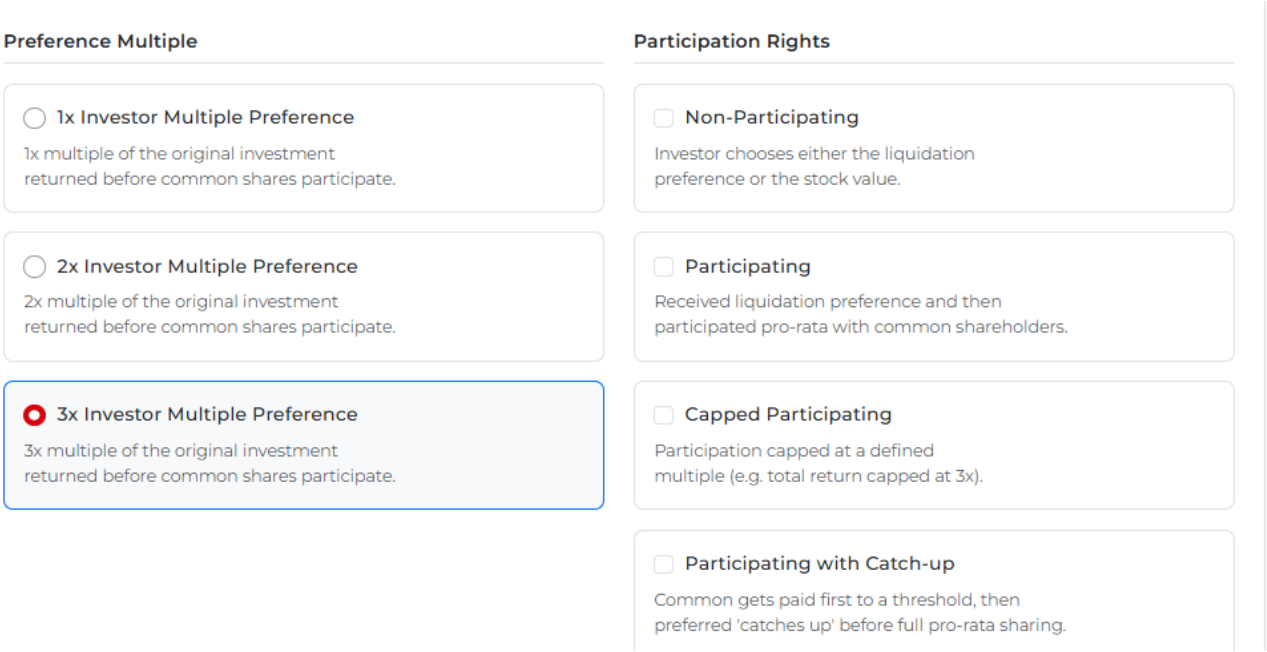
Round 0 Setup: Founders issued 100,000 common shares (100% ownership). Cap table starts simple—no investors, fully diluted basis = 100,000 shares.

Now add **Series A labeled as Convertible Note** (bridge scenario). Cash comes in now; converts later.

Round Size Fields to Fill

Field	Example (CAD)	Purpose
Investment Amount	1,000,000	Principal cash received now (tracks liability size).
Currency	CAD $	Standard.
Pre-Money Valuation	8,000,000	**Valuation cap**—sets conversion price floor.
Post-Money Valuation	9,000,000	Auto-calc: Pre + Amount. Shows *projected* if converted now.

Main query:
If a company creates a Seed SAFE round first and then creates a Series A preferred equity round, can the company create another Seed Convertible Note round after that?

Explanation needed for below screenshot:


Regarding this, please explain whether, in the form, the user can choose options from the left side or the right side, and what combinations are allowed between the two.
Also clarify which combinations are valid and which are not when creating different rounds (Seed SAFE, Seed Convertible Note, Series A / Preferred Equity).
