
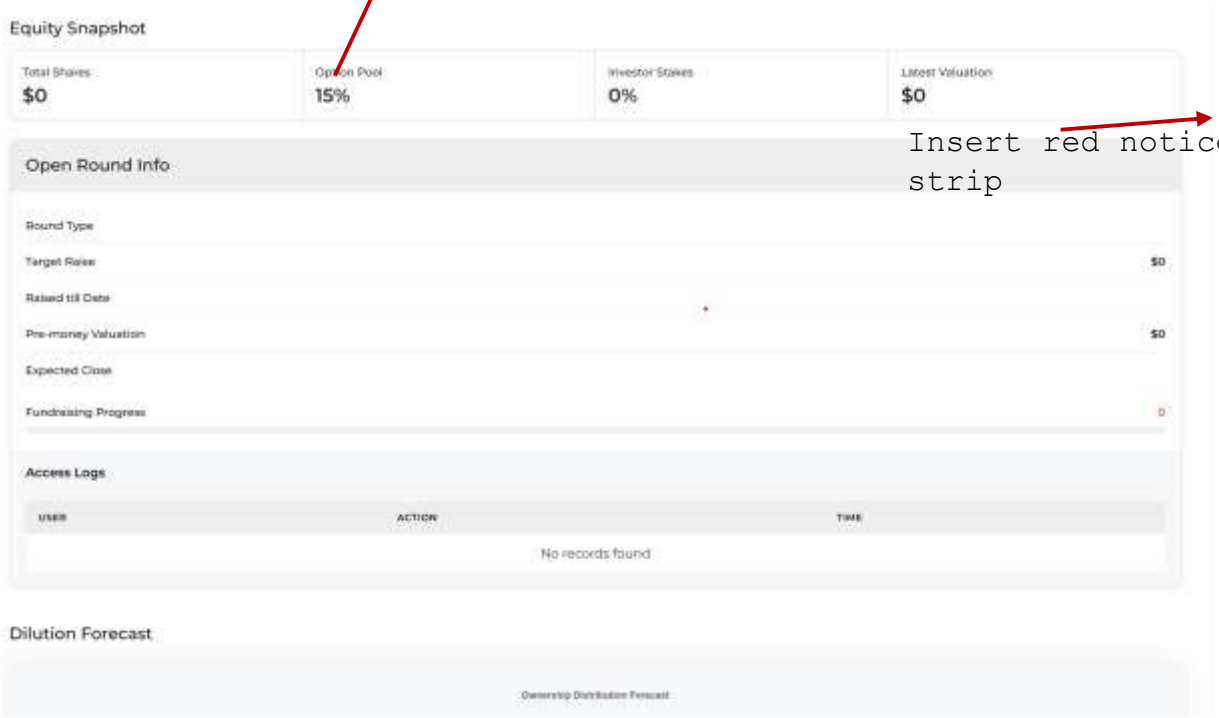
Navigation: Dashboard

Just signing with a new company. This should NOT be set at 15%.

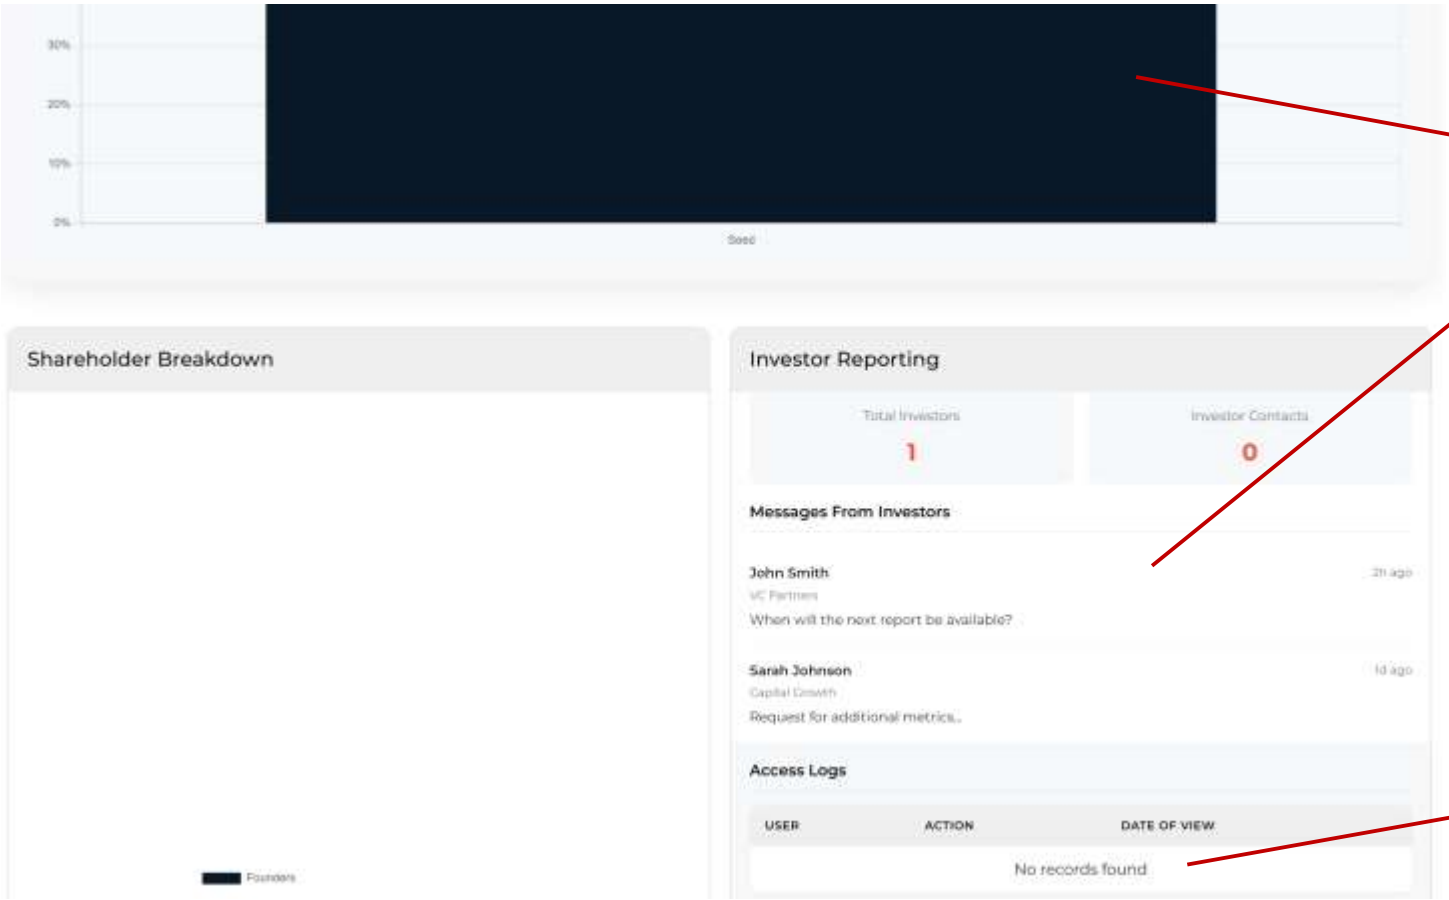


Insert red notice strip

ACTION REQUIRED: Establish a clear baseline ownership for your company

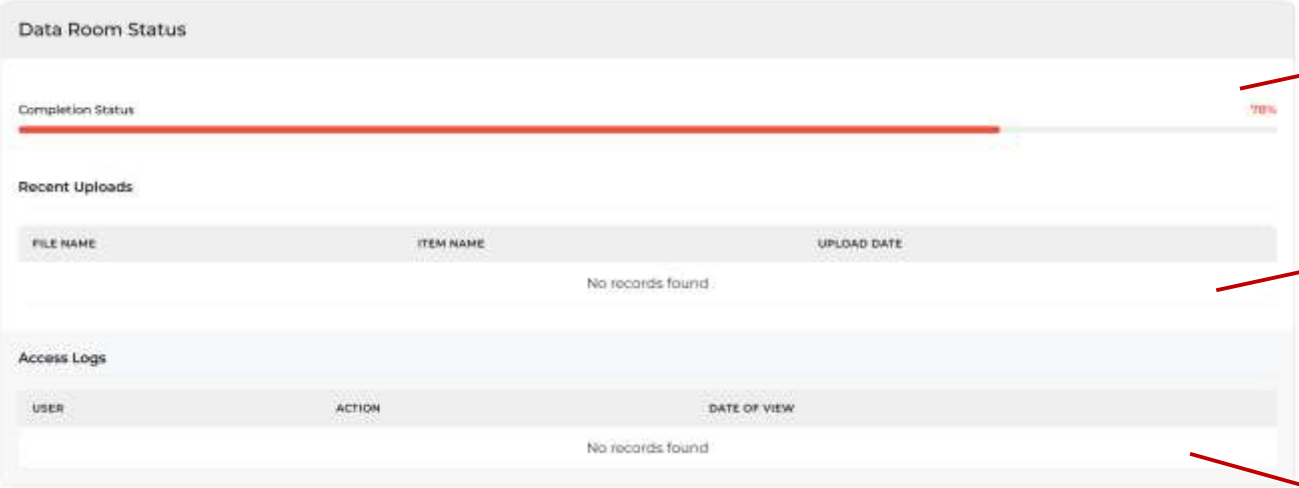
When a company logs into their account for the first time, they are required to set up their initial equity ownership structure: "Previous Funding Rounds". This baseline will be impacted by all future funding rounds, including dilution and other changes.

When they click on the button, the user will be directed to the "Round Management" section.



This should be empty if no entry from the Round Management section has been made.

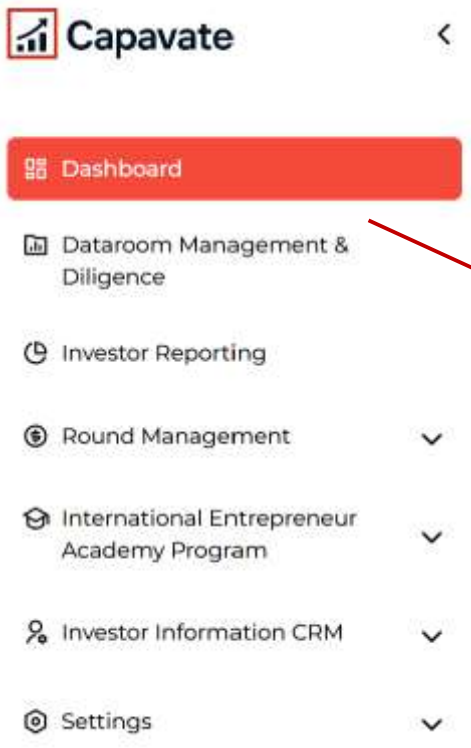
I'm assuming this is the log for which investors have viewed the investment documents.



Please explain what this is reporting? I didn’t upload anything, but it’s at 78%.

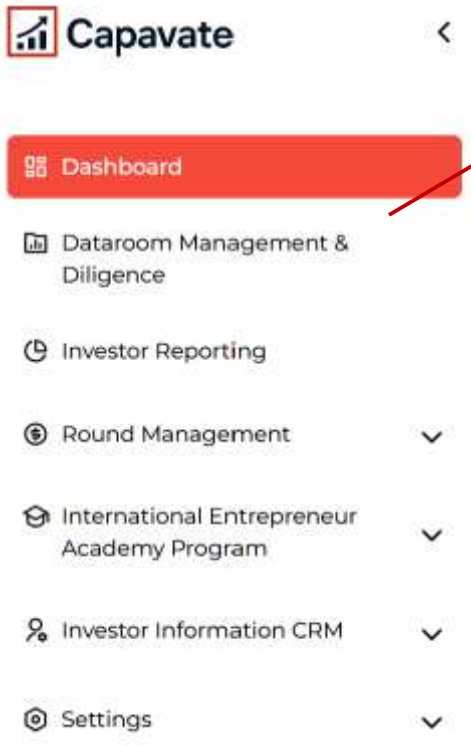
I’m assuming that this is the names of the lates files uploaded to the data room?

Is this a log of all investors who accessed the data room? If so, we may also want a link to the Investor Portal Interaction (up to you to decide on this one).



Navigation: Company Profile

NEW



Add new section:
"Company Profile"

The upload should also simultaneously be updated in the data room section.

"Company contact info"
Enter all company contact details provided during registration.

"Legal Entity Information"

- **Upload Articles of Incorporation**
- **Legal Entity Name** (as registered)
- **Business Number (BN)** issued by the registration office
- **Jurisdiction of Incorporation (city + country)**
- **Date of Incorporation**
- **Type of Entity**
- **Entity Structure** (e.g., Private or Public Corporation)
- **Registered Office Address**
- **Mailing Address** (if different)

"Signatories for the Company (Authorized Signatory)"
Enter all 'Signatories for the Company' details provided during registration.

"Business Summary"
Enter all three questions/answers details provided during registration.

Each section should be editable.

Include TIME STAMP of the last edit/save. WE NEED TO TRACK THESE IN OUR RECORDS. WE CAN ALSO SHOW THEM IN A 'LOG' SECTION IN THE SETTINGS SECTION.

See the next slide for the list to be included in the pull-down menu. It will display depending on the Jurisdiction of Incorporation answer.

Argentina	SA (Sociedad Anónima), SRL (Sociedad de Responsabilidad Limitada), SCS, SCA, Cooperative, Sole Proprietorship

Change to:
"Signature to Approval"

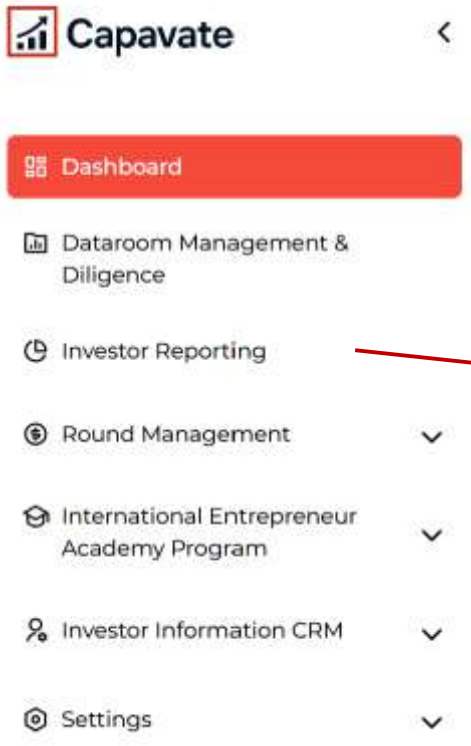
We will require official sign-offs by the "Signatories for the Company (Authorized Signatory)" as indicated in the Company Profile section.

All sign-offs will be recorded in our LOGS (in the 'Settings' section).

When the signed-in user clicks on this button, the ONLY way to sign is for them to be included in the company's Signatories (Authorized Signatory).

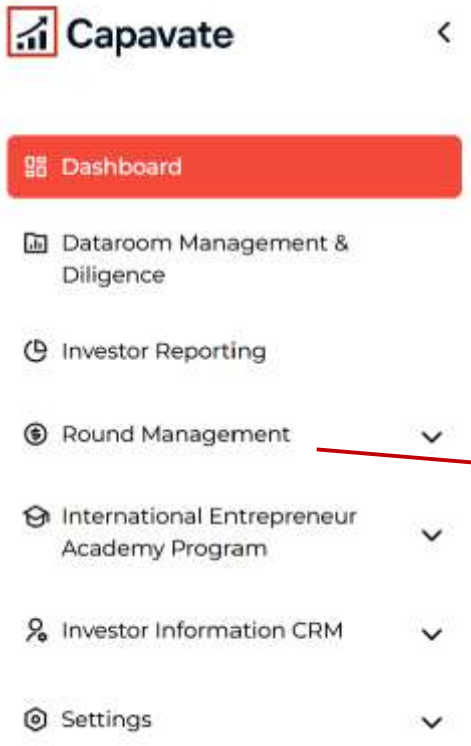
How can we include 'digital signature' in this?

Review **ALL** of these tips. They need to be more user-friendly displayed. Many of them have dots and colons in the wrong place. Please correct.



Navigation: Investor Reporting

Remember that this platform is also meant to educate early-stage entrepreneurs. How can we design the 'tips' section to effectively teach and inform them?



Navigation: Round Management

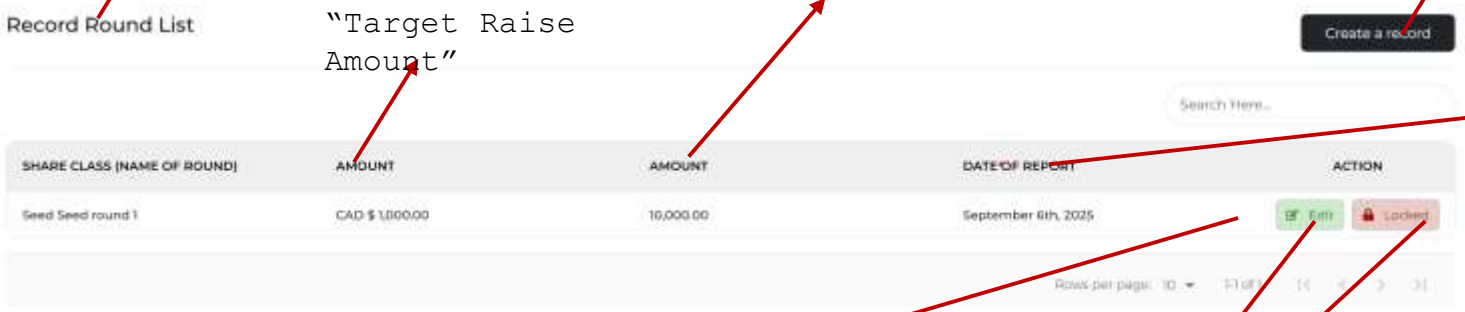
Once you make these basic edits, I will have a financial analyst test

Change title to:
"Investment Rounds Overview"

Change title to:
"Start New Funding Round"

Change title to:
"Number of Shares"

Change title to:
"Target Raise Amount"



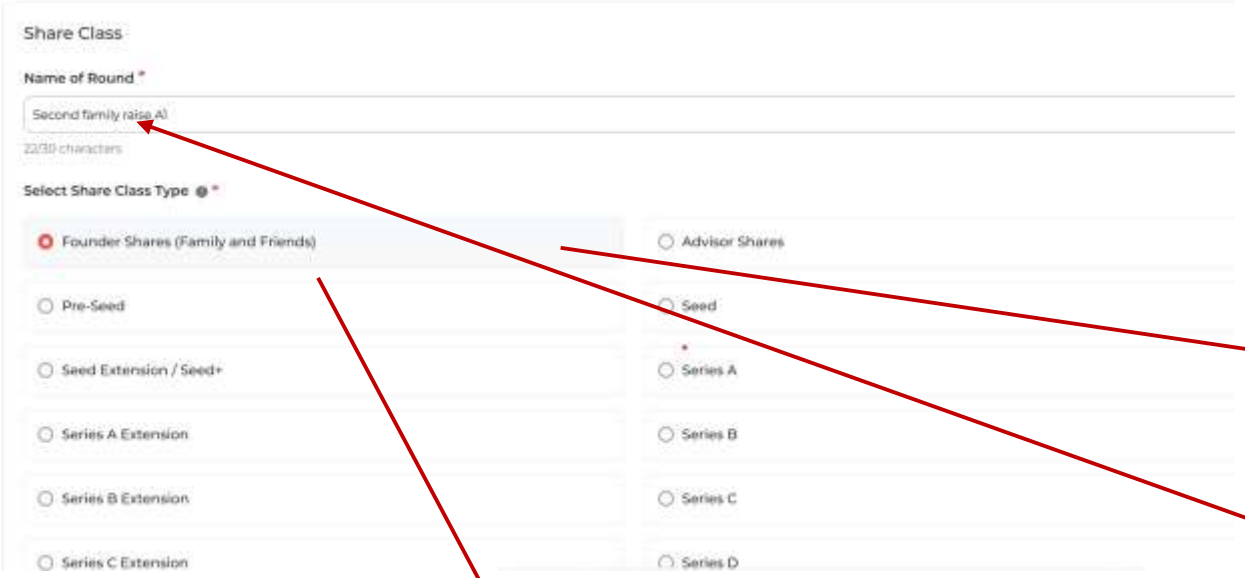
Change title to:
"Status of Round"
- If the round is OPEN, then indicate "ACTIVE"
- If the round is CLOSED, then indicate: "CLOSED: mm/dd/yyyy"

Insert date of round close.

Add "View" to have a quick view of the round details.

ONLY a Signatory for the Company (Authorized Signatory) can EDIT, LOCK, or UNLOCK a round.

Each time this action is initiated, it needs to undergo a digital signature with full-time stamps. These are official, legally binding tasks, and we must record them in the logs.

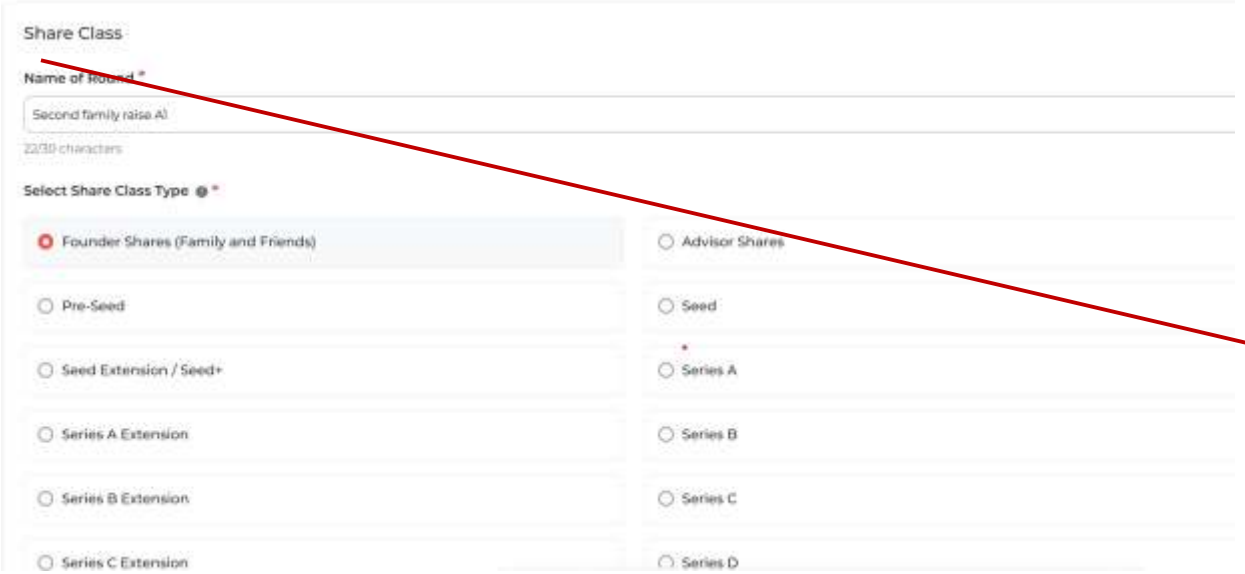


This is a mandatory FIRST selection. All first time companies MUST go through this before selecting any other class of share.

For first-time users ONLY:

1. **Deselect all other options.**
2. **Automatically enter "<u>Founding Share Allocation</u>" as the Name of Round.**
3. **Once this is completed, all options will be available for the user.**

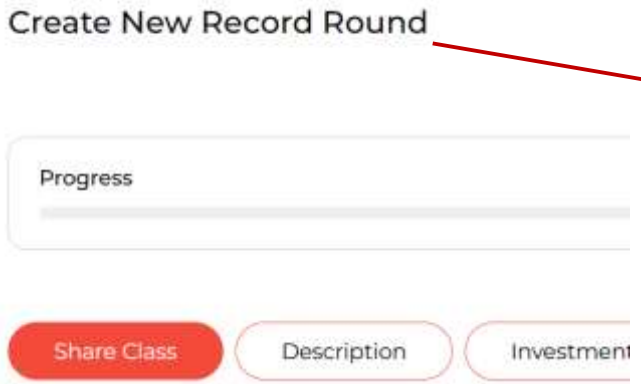
Just below the Founders Shares… include a new Share Class: "Employee Options Pool"



For first-time users ONLY, place a message (in red):

"To set up your company's history correctly, start by entering your original ownership: who owned what shares when the company was first registered. Once that's done, you can add all future investment rounds. This will keep your ownership accurate as you add investors and makes future VC rounds smoother by showing you've got your cap table in order."

This message will not be visible once this stage is completed.

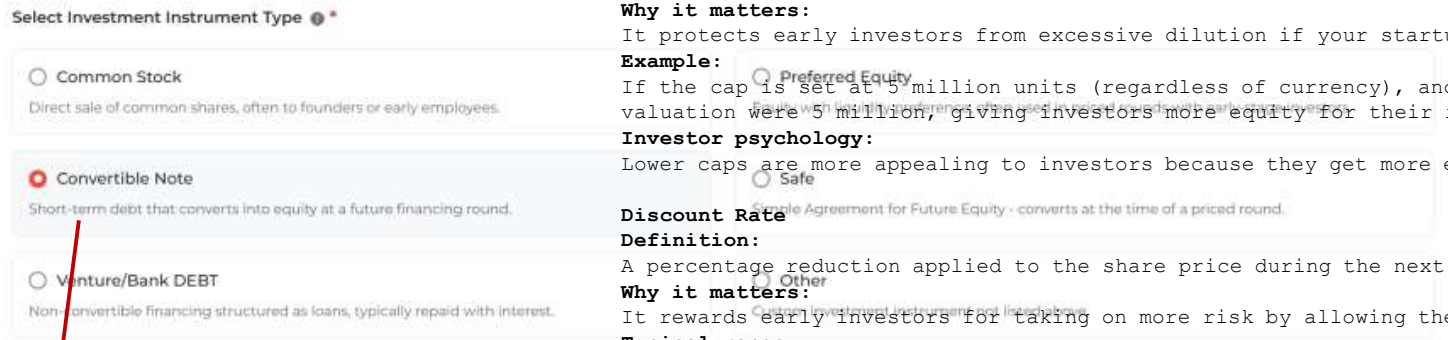


Change to: "New Financing Round"

Select Investment Instrument Type *

- Common Stock
  Direct sale of common shares, often to founders or early employees.
- Preferred Equity
  Equity with liquidity preference, often used in priced rounds with early-stage investors.
- Convertible Note
  Short-term debt that converts into equity at a future financing round.
- Safe
  Simple Agreement for Future Equity - converts at the time of a priced round.
- Venture/Bank DEBT
  Non-convertible financing structured as loans, typically repaid with interest.
- Other
  Custom investment instrument not listed above.

When a user selects a specific investment instrument type, an input area will open to allow for additional variables. For each section in the following slides, the user must enter specific input values.



Convertible Note Variables:

- Valuation Cap
- Discount Rate
- Maturity Date
- Interest Rate
- Convertible Trigger

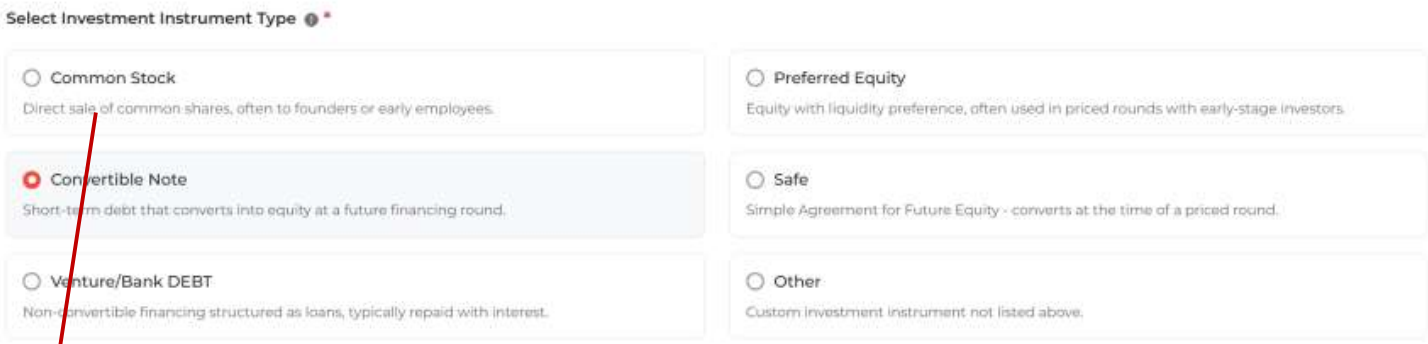
Definition:
The maximum company valuation at which the convertible note will convert into equity.
Why it matters:
It protects early investors from excessive dilution if your startup's valuation surges before the next funding round.
Example:
If the cap is set at 5 million units (regardless of currency), and the next round values the company at 10 million, the note converts as if the valuation were 5 million, giving investors more equity for their initial investment.
Investor psychology:
Lower caps are more appealing to investors because they get more equity. But for founders, it means giving up a larger ownership slice.

Discount Rate
Definition:
A percentage reduction applied to the share price during the next equity round.
Why it matters:
It rewards early investors for taking on more risk by allowing them to buy shares at a lower price than new investors.
Typical range:
10–30%
Example:
If the next round prices shares at 1.00 unit (currency) each, and the discount is 20%, note holders convert at 0.80 units (currency) per share.
Negotiation tip:
Investors may request both a discount and a valuation cap. Be ready to explain your rationale for offering one or both.

Maturity Date
Definition:
The deadline by which the note must either convert into equity or be repaid.
Why it matters:
It sets a timeline for your fundraising efforts and gives investors a fallback if no priced round occurs.
Typical range:
12–24 months
What happens at maturity:
If no qualifying round occurs, investors may request repayment or renegotiate conversion terms.
Risk management:
If you're unsure about raising funds within the timeframe, consider a longer maturity or include extension options.

Interest Rate
Definition:
The annual interest accrued on the principal amount of the note.
Why it matters:
It increases the total amount that either converts into equity or must be repaid.
Typical range:
Varies by region and economic conditions.
Example:
A note worth 100,000 units (currency) with 6% annual interest over 18 months accrues 9,000 units (currency) in interest, so 109,000 units (currency) convert.
Conversion vs. repayment:
Most notes convert accrued interest into equity, but some may require repayment in cash. Clarify this in your agreement.

Conversion Trigger
Definition:
The event that causes the note to convert into equity.
Common triggers:
A qualified equity financing (e.g., raising a minimum threshold amount)
Acquisition or IPO
Reaching the maturity date (sometimes negotiable)
Why it matters:
It determines when investors officially become shareholders.



Common Stock variables:

- Company Valuation
- Warrants (optional)
    - Exercise Price (Strike Price)
    - Expiration Date
    - Warrant Ratio
    - Type Warrant
        - Call Warrant
        - Put Warrant

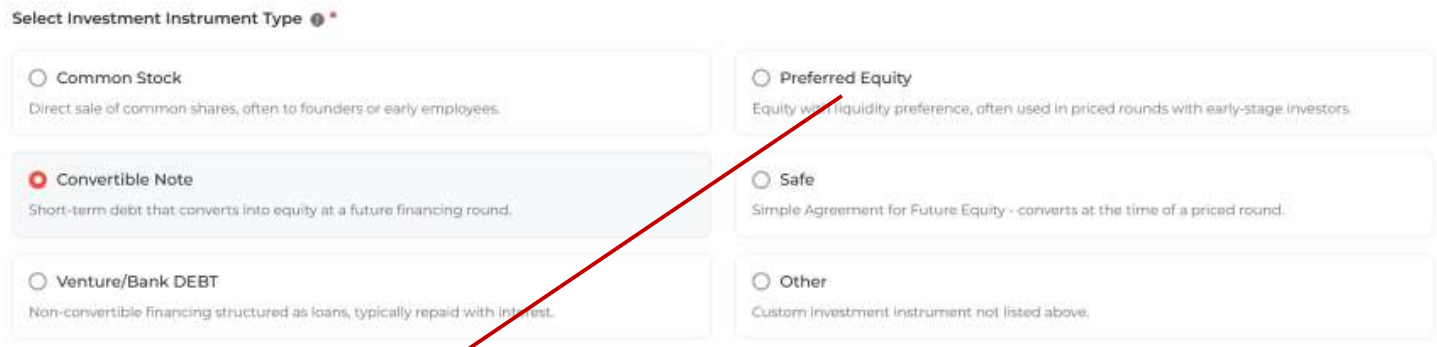
What is a Warrant?
A **warrant** is like a special coupon that gives someone (usually an investor or lender) the **right, but not the obligation, to buy shares of your company at a fixed price,** sometime in the future. It includes the following variables to consider:

Exercise Price (Strike Price)
The price at which the investor can purchase the underlying stock.
TIP: Must be attractive enough to offer upside, but not so low that it dilutes existing equity unfairly.

Expiration Date
The time frame during which the warrant can be exercised.
TIP: Longer durations offer more flexibility and potential upside, but may reduce urgency.

Warrant Ratio
Defines how many shares can be purchased per warrant.
TIP: A 1:1 ratio is common, but you can adjust based on your capital structure.

Type of Warrant
Call warrants (<u>most common</u>) allow buying shares.



Preferred Stock variables:

- Company Valuation
- Warrants (optional)
  - Exercise Price (Strike Price)
  - Expiration Date
  - Warrant Ratio
  - Type Warrant
    - Call Warrant
    - Put Warrant

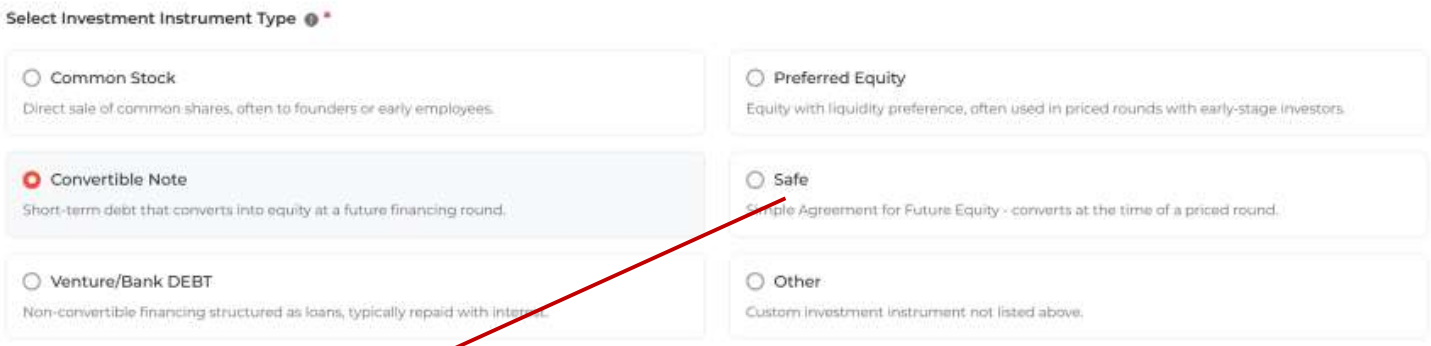
What is a Warrant?
A **warrant** is like a special coupon that gives someone (usually an investor or lender) the **right, but not the obligation, to buy shares of your company at a fixed price,** sometime in the future. It includes the following variables to consider:

Exercise Price (Strike Price)
The price at which the investor can purchase the underlying stock.
TIP: Must be attractive enough to offer upside, but not so low that it dilutes existing equity unfairly.

Expiration Date
The time frame during which the warrant can be exercised.
TIP: Longer durations offer more flexibility and potential upside, but may reduce urgency.

Warrant Ratio
Defines how many shares can be purchased per warrant.
TIP: A 1:1 ratio is common, but you can adjust based on your capital structure.

Type of Warrant
Call warrants (most common) allow buying shares.



SAFE variables:

- Valuation Cap
- Discount Rate
- Pre-Money **OR** Post-Money

Radio button

Valuation Cap

Sets the maximum company valuation at which the SAFE converts to equity.

- *Lower cap = more equity for investors*
- *Higher cap = better for founders*

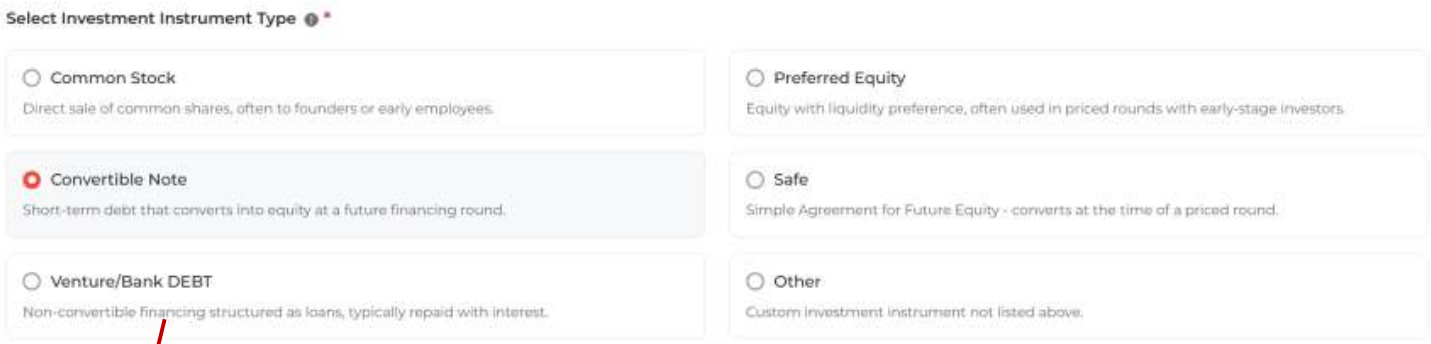
Discount Rate

Gives investors a percentage discount on the future equity round.

- Typical range: 10–25% (depends on your region and your underlying currency)
- *Higher discount = more equity for investors*

Pre-Money vs. Post-Money SAFE

- *Pre-money*: Ownership is calculated before the SAFE investment—more founder-friendly but less predictable.
- *Post-money*: Ownership is calculated after the SAFE investment—clearer for investors, but can dilute founders more.



Venture/Bank Debt variables:

- Interest Rate
- Repayment Schedule (in months)
- Warrants (Optional)
  - Exercise Price (Strike Price)
  - Expiration Date
  - Warrant Ratio
  - Type Warrant
    - Call Warrant
    - Put Warrant

Interest Rate: Typically higher than traditional loans due to the risk profile of startups.

Repayment Schedule: Most venture debt comes with interest-only payments initially, followed by a lump-sum principal repayment (bullet structure).

Warrants: Lenders often ask for equity warrants as part of the deal, which can dilute ownership later.

What is a Warrant?
A **warrant** is like a special coupon that gives someone (usually an investor or lender) the **right, but not the obligation, to buy shares of your company at a fixed price,** sometime in the future. It includes the following variables to consider:

Exercise Price (Strike Price)
The price at which the investor can purchase the underlying stock.
TIP: Must be attractive enough to offer upside, but not so low that it dilutes existing equity unfairly.

Expiration Date
The time frame during which the warrant can be exercised.
TIP: Longer durations offer more flexibility and potential upside, but may reduce urgency.

Warrant Ratio
Defines how many shares can be purchased per warrant.
TIP: A 1:1 ratio is common, but you can adjust based on your capital structure.

Specify the total number of shares being issued in this round only

Total Shares Issued in this Round *

10,000,00

Date Round Closed *

MM/DD/YYYY or ROUND OPEN

Calendar: MM / DD / YYYY. If round not closed, type "ROUND OPEN".

This does NOT apply for Venture Debt instruments

This question should be a radio button: "Is this round closed or active?" CLOSED // ACTIVE

If **CLOSED,** the user needs to (1) add the date of closure (MM/DD/YYYY) and (2) add everyone who has invested in the round:

- First Name
- Last Name
- Amount invested
- Email

NOTE: The names will go into the CRM; however, NO auto emails will be sent to them.
